

### Empty Drum Preparation.

- It is not acceptable to have any liquid seeping from baled product.
- An undrained drum is deemed to be hazardous waste.
- The person in the best position to prepare an empty is the user of the product.
- Water soluble chemical and detergent drums must be triple rinsed and well drained with tops off.

#### Step 1.

Drill holes or by using a disc grinder with grinding disk, make cuts in the two lowest free draining corners. Press firmly to minimize heat melting plastic onto the disk.

#### Step 2.

Place upright on a slopping mesh/grate over a holding tank or similar. Then allow enough time to fully drain away, particularly oil containers, we recommend draining overnight.

#### Step 3.

Bring them into us.
